NEW RANGE OF AUDIOMETER PRODUCTS

"screening", basic diagnosis, clinical diagnosis

AUDIOMETER SIBELSOUND 400

- Calculation of hearing loss and diagnosis
- Internal database > 1000 tests
- Suprathreshold tests
- High frequency
- Musical frequencies
- Automatic masking
- Connectivity with other management systems
- Customizable

USB

SIBELSOUND 400 · audiometer

Description

The *SIBELSOUND 400*, is a revolutionary two-channel audiometer. The entire system is controlled by Digital Signal Processor (DSP) for reliable, quick and easy audiometric exploration of hearing thresholds and screening tests, such as suprathreshold pure tone tests.

The *SIBELSOUND 400* audiometer was developed by SIBEL, S.A.U.'s RDI department in collaboration with the Surgery Department (Ear, Nose and Throat and Audiology) of the University of Barcelona and well-known specialists in the field, in accordance with standard criteria of both national institutions such as the UNE and international institutions such as the IEC, ISO, etc.

DSP digital technology

A Digital Signal Processor that uses an optimised microprocessor for applications that require very high-speed numerical operations. The processor is capable of working with multiple data in parallel, while its design and specific instructions are ideal for digital processing, features that distinguish a DSP from other types of processors.

Communications

One of the great qualities of the *SIBELSOUND 400*, is a communications system with other equipment that allows it to:

- Transfer information from the unit's internal database to a PC
- Communicate with a PC in real time
- Export patient tests to other management systems (EMR)
- Update the unit's internal firmware

Using the appropriate software, communications can be established through two different channels:
- USB (standard)
- RS232C Serial (optional)

Signals

The *SIBELSOUND 400* features:
- Pure tones (continuous, pulse, alternate)
- Frequency modulation
- Amplitude modulation
- Speech Noise
- Narrow Band Noise
- White Noise

Customizable

SIBELSOUND 400 · audiometer

Reset
To return to the previous menu, cancel an action, delete data entries or place the counters at zero.

Save
Saves a test to the database.

Intercom
Activates the technician/patient intercom.

Right ear attenuator
Activates or deactivates a signal, depending on the "direct/inverted" working mode.

SISIGRAM
Generates the manual increases in the SISIGRAM test.

Left ear attenuator
Activates or deactivates a signal, depending on whether the working mode is direct or inverted.

Right channel signal
Silencer or key which, when activated, sends or blocks the signal transmitted to the patient, depending on whether the working mode is direct or inverted.

Invert
This inverts the direct/inverted working mode of the signal keys.

Left channel signal
Silencer or key which, when activated, sends or blocks the signal transmitted to the patient, depending on whether the working mode is direct or inverted.

Hz.
Decreases and/or increases the frequency of the pure tone signal applied to the patient.

Intro
Used to save a test's thresholds and to give selected information.

Patient
Used to enter patient reference information in a test to be printed, store in the unit's internal database or transfer to a PC's database.

SIBELSOUND 400 · audiometer

Audiometry software W50

SIBELMED W50 is sophisticate software for viewing, storage, transmission, analysis and introduction of audiometric tests in a Microsoft Windows ® environment with the following options:

- Management of various patient databases
- Download of audiometric test data from SIBELSOUND 400 and AC50 audiometers
- Manual audiometric test data input performed with other audiometers
- Display of different types of audiometric tests
- Diagnosis:
  (COUNCIL, IMSS MEXICO, ELI, SAL, KLOCKHOFF, MOH, others...)
- Choice of various types of diagnosis parameters
- Test graphics
- Comparison of tests from the same patient
- Customizable reports
- Test report printouts
- Option for deleting tests from the unit

Channels: Two
Functional specifications: See tables of models and frequencies
Transducers: TDH39 - HDA200 or HDA300 - B71W (depending on the model)
Screen: LCD alphanumeric backlighted 2 X 16
Protection: Time restricted high frequency signals to protect both patient and unit
Self-check: Automatically checks the status of the audiometer
Unit test: Allows the user or technician to check the condition of certain functions or components
Custom settings: Programme to personalise the audiometer according to the needs of the user
Calibrations: Equipped with calibrations according to ISO and ANSI
Safety standards: EN 60601-1:2006+AC:2010+A1:2013, EN 60601-1-2:2015
Audiometry standards: EN 60645-1:2015, EN60645-2:1997
Calibration standards: EN ISO 389-1:2000, EN ISO 389-3:1998, EN ISO 389-4:1998, EN ISO 389-5:2006, EN ISO 389-7:2005, ANSI S3.6-2004
Working temperature: 5 to 40 ºC
Relative humidity: <90% (no condensation)
Power supply: 100 to 240V ±10% / 50/60 Hz ±3%
Power: <50 VA
Dimensions: 390 mm x 260 mm x 105 mm
Weight: 2.4 kg without accessories
Standard accessories: Depending on the model
Optional accessories: Depending on the model
